

## CLAIMS

What is claimed is:

1. (Currently amended) A nucleic acid sequence comprising:

$P_n-S_n-B_n-(ZR)$ -transport peptide  $-(Z_1Z_2)$ -protein(Y)  $-(Z_1Z_2)$ -protein(Y<sub>m</sub>)-T;

wherein:

the nucleic acid codes for a fusion protein comprising a peptide encoded by transport peptide linked via a peptide encoded by a first  $Z_1Z_2$  to a protein encoded by said protein(Y) which is linked to T when m equals zero, or when m does not equal zero, is linked to a peptide encoded by a second  $Z_1Z_2$  which is linked to a chain comprising at least one and up to 5 proteins encoded by protein(Y<sub>m</sub>), which either correspond to the protein encoded by said protein(Y) or can be different from the protein encoded by said protein(Y);

the peptide encoded by transport peptide improves the rate of secretion of the protein encoded by said protein(Y) and the protein encoded by said protein(Y<sub>m</sub>), when the protein encoded by said protein(Y<sub>m</sub>) is present;

$P_n$  comprises a promoter sequence;

$S_n$  comprises a nucleic acid sequence encoding a signal or leader sequence;

$B_n$  is 1 to 15 codons, when n is an integer from 1 to 15, or a chemical bond, when  $n=0$ ;

Z is a codon for lysine or arginine;

R is an arginine codon;

transport peptide comprises a nucleic acid sequence encoding hirudin ~~a peptide that is transported across membranes;~~

$Z_1$  is a codon for lysine or arginine or a portion thereof or a chemical bond when  $Z_1$  and  $Z_2$  combine to make the second  $Z_1Z_2$  and  $m=0$ ;

$Z_2$  is a codon for lysine or arginine or a portion thereof or a chemical bond when  $Z_1$  and  $Z_2$  combine to make the second  $Z_1Z_2$  and  $m=0$ ;

protein( $Y_m$ ) comprises a nucleic acid sequence encoding at least one and up to 5 proteins that are produced and secreted by yeast when  $m$  is an integer from 1 to 5, or is a chemical bond when  $m=0$ ;

protein( $Y$ ), selected from the group consisting of mini-proinsulin, proinsulin, interleukin, lymphokine, interferon and blood clotting factor, comprises a nucleic acid sequence encoding a protein that is produced and secreted by yeast and whose biological activity, when protein( $Y_m$ ) is not a chemical bond, is not impaired by a basic dipeptide extension encoded by the first or second  $Z_1Z_2$  or allows degradation of the basic dipeptide extension by carboxypeptidase; and

T is an untranslated expression-enhancing nucleic acid sequence.

Claims 2 - 5. (Canceled).

6. (Original) A multicopy vector comprising the nucleic acid of claim 1.

7. (Original) A plasmid comprising the nucleic acid of claim 1.

8. (Original) A host cell comprising the nucleic acid of claim 1 as a part of the host cell chromosome, as a part of a mini-chromosome, or extra-chromosomally.

9. (Original) The host cell of claim 8, wherein the host cell is a yeast.

10. (Original) The host cell of 9, wherein the yeast is selected from *Saccharomyces cerevisiae*, *Kluyveromyces fragilis*, *Hansenula polymorpha*, and *Pichia pastoris*.

11. (Original) A host cell comprising the multicopy vector of claim 6.

12. (Original) A host cell comprising the plasmid of claim 7.

Claims 13-26. (Canceled)
